# Index to electronics—Volume VI

## January to December issues, inclusive, 1933

## McGraw-Hill Publishing Company

**330 West 42nd Street, New York City**

**Pages by Issues**

January ..... 1-30
February ..... 31-58
March ..... 59-86
April ..... 87-116
May ..... 117-146
June ..... 147 176
July ..... 177 206
August ..... 207-236
September ..... 237 264
October ..... 265-294
November ..... 295 322
December ..... 323-354

(ed) Editorial • Illustrated (N) News

**Acoustics:**

Acoustically compensated volume control for radio and phonograph sets. Wolff & Cornell ..... •50
Perforated steel sheets pass sound waves ..... 222
Radio acoustic ranging. Davis Belcher ..... •308

**Aeronautics:**

Every radio station a guide for airmen. •310
Radio system for landing aircraft during fog. H. Diamond ..... •158

**Amplifiers:**

Acoustically compensated volume control for radio and phonograph sets. Wolff & Cornell ..... •50
Bridge type push pull amplifiers. Leonard Tulauskas ..... •134
Fidelity compensation by regeneration. 18
Filter type interstage amplifier coupling. W. G. Stone ..... •194
High gain a.c. d.c. amplifier. E. R. Meissner ..... •195
Push pull amplifier graphics. C. E. Kilgour ..... •73

Book reviews..22, 42, 77, 101, 131, 206, 287

**Broadcasting:**

Audition panel at KFWB..... •221
Controlling receivers from the broadcast transmitter ..... •327
"Facsimile" to the aid of the broadcasters (ed) ..... 139
550 versus 1,500 kilocycles (ed)..... 20
Long versus short broadcast waves.. 19
NBC's new Radio City studios..... •324
Proper sites for broadcast stations. C. W. Horn ..... •66
Radio broadcast problems gather.... 156
Simplified method of modulator design. E. A. Laport ..... •184
Suppression of transmitter harmonics. C. G. Dietsch ..... •167
Time delay effects in synchronous broadcasting. C. B. Aiken..... •124

**Cathode Rays:**

Cathautograph: an electronic pencil. A. B. Dumont ..... •7
Cathode ray tubes for oscillograph purposes. R. T. Orth ..... •332

**Century of Progress:**

Electronics at the Chicago World's Fair ..... •148

**Codes:**

Code and the engineer ..... •246
NRA radio industry code ..... 208
RMA accepts NEMA code ..... 239
Coils, broadcast receiver. F. N. Jacob.... 210
Condensers, electrolytic. R. O. Lewis.... •212

**Electron Tubes:**

Advertising possibilities with electron tubes ..... 133
Electronic microscope—studies of electronic emission ..... 49
Electronic tube microscope. M. Knoll. •243
Ignition—new controlled rectifier. D. D. Knowles ..... •164
Radio City theaters' electron tubes.. •32
Electronic periodicals ..... 24

**Electrons:**

Faster electrons ..... •216

**High Frequency:**

Expanding ultra short wave radio.... •266
High frequency waves kill pests in beans ..... 193
Short waves bake crustless bread.... 163
Tubes to fit the wavelength. B. J. Thompson ..... •214

**Lights and Lighting:**

Control by non-linear circuits..... •19
Controlled school lighting ..... 255
Daylight control of factory lighting saves electricity ..... 14
Illumination control in offices..... •268
Opposed photronic cells responsive, independent of general illumination.. 44
Photocell street lighting ..... 74
River marking lights photocell controlled ..... 103
Sodium vapor illuminants..... •189

**Measurements:**

Calibration of low audio frequencies. E. R. Meissner ..... 137
Cathode ray tubes for oscillograph purposes. R. T. Orth ..... •332
Cuprous-Oxide rectifier life tests..... 18
Frequency comparison with the cathode ray oscillograph. C. B. Fisher.... •310
Low range electrostatic voltmeter. W. P. Koechel ..... •252
Magnetostriction oscillator..... 104
Measuring one billion ohms. I. J. Saxl 171
Measuring pressure and weight..... 103
Measuring the damping coefficient of oscillating circuits ..... 18
Measuring the intensity of 700 Kv. X-rays ..... •170
New impedance measuring device. A. W. Barber ..... •194
Oscillator circuit measures humidity.. 75
Phontom tester. Knowles & Haller.. •248
Rectifier for modulation measuremnts. J. L. Potter ..... •247
Resistance stabilized oscillators. F. E. Terman ..... •190
75 watt commutator type inverter. H. J. Reich ..... •252
Shorted turn indicator. C. G. Seright. •136
Simultaneous traces with cathode ray oscillograph. C. B. Brown..... •170
Square top filters ..... •136
Thyratron laboratory rectifier. R. M. Kime ..... •219
Ultra short wave wavemeters. W. H. Moore ..... •311

**Music:**

Controls fountains in changing colors. 223
Electronic musical instruments of Europe and U. S. ..... •65
Transmit "auditory perspective" in music ..... •118
National Industrial Recovery Act—and radio ..... •178
New products.....25, 56, 82, 111, 142, 174, 200, 231, 261, 288, 317, 348

**Noise:**

Suppression of auto radio noise. Browning & Haskins ..... •273

**Patents:**

British patents....30, 86, 116, 146, 204, 236, 294, 323, 352
U. S. patents....28, 58, 85, 114, 144, 202, 233, 264, 291, 326, 350

**Photo-Electric Cell:**

Cesium-oxygen silver photo cell..... 49
Comparison of photocells ..... 171

**Photo-Electric Cell—Industrial Applications:**

Bar and rod heating controlled by electric eye ..... 103
Batching of cement ..... •268
Color matching in automobile plant.. 162
Color measuring instruments. Herbert Neustadt, Jr. ..... •128
Control of wood pulp cooking..... 75
Controlling water supply ..... 103
Counting crates on conveyors ..... 14
Demand charges saved by cell..... 223
Detects smoke or fire ..... 306
Detects turbidity in Denver water supply ..... •306
Directs register of cutting knife..... •269
Installing photocell control. R. D. McDill ..... 276
Insures perfect jigsaws ..... •163
Laundry conveyor operated by photocell ..... •162
List of photocell applications..... •270
Looking ahead as 1933 opens..... •2
Mine doors photocell controlled..... 278
Multi photocell checks up theater admissions ..... 193
Newspaper measures opacity of paper stock ..... 14
Oil burning plant safeguarded by cell. 222
Packaging machines controlled by photoelectric cell. E. L. Smith.... •302
Photo-electric halftone engraver..... 222
Photo-electric photometer tests air purity ..... 45
Photo-electric U-V photometers..... 105
Photometry of stars by means of a photocell and a low grid current tube 49
Press stop operated by photocell..... 75
Reflectometer compares "amount of ink" in print ..... 193
Rotation of frictionless meter counted. 44
Safety ray elevators at Radio City.... •269
Soaking pit covers operated by photo-tubes ..... 306
Stroboscope inspects high speed printing ..... 14
Stroboscopic testing of meters ..... 15
Thermometer control by photronic cell. •74
Truck garage doors controlled by photocell ..... •132
Voting by means of cells ..... 222
Web control of printing press..... 102
Public address at the Century of Progress.. •274

**Radio:**

Audio-radio increasing in 1933..... •8
Back to quality in radio receivers! (ed) ..... 106
Cabinet design. R. K. Gerth..... •182

Changes in sun spot numbers 1923 to 1932 give clue to radio vagaries.. *69
Circuits for amplified automatic volume control ..... *16
Controlling receivers from the broadcast transmitter ..... *327
Dual band receiver design. Edgar Messing ..... *300
Electronics in resistor manufacturing. Leon Podolsky ..... *180
Forest fire fighting helped by radio... 223
Gaseous discharge tubes for radio receiver use. J. F. Dreyer, Jr. ..... *40
How manufacturers can cash in on radio prosperity campaign. Earl Whitehorne ..... 218
Inter carrier noise suppression. N. E. Wunderlich ..... *13
Killing weevils in wheat by short wave 75
NBC's new Radio City studios..... *324
Night radio effects ..... 194
Prices of components tend to stabilize. 64
Recent advances in the radio art.... *328
Reflex circuit considerations. Stinchfield & Schade ..... *153
Statistics of production and use..... 60
System for landing aircraft during fog. H. Diamond ..... *158
This new radio prosperity? ..... *296
Time to re-style radio sets is now!.. *88
Trends in radio design and manufacturing ..... *151
When will radios be styled for sales appeal? W. D. Teague..... *62
Radio City theaters' electron tubes..... *32
Review of electronic literature here and abroad..23, 54, 80, 108, 140, 198, 228, 258, 286, 314, 346

**Sound Pictures:**

Control of sound quality in picture production. Carl Dreher ..... *10
Ounce crystal microphone carried on fish-pole ..... *102
Outdoor automobile movie..... *209
"Rogue's gallery" of talking films.... 45

**Speakers:**

Central secretarial staff employs loudspeakers ..... 74
Loudspeaker cost vs. quality. H. S. Knowles ..... *240

**Superheterodynes:**

Iron core intermediate frequency transformers. Alfred Crossley ..... *298
Litz wire coils for i-f and r-f transformers ..... *303; *342

**Television:**

Balance sheet of television ..... 323
Zworykin's iconscope ..... *188

**Thyratron:**

As an oscillator ..... 18
Control of welding in tube manufacture. Lord & Livingston ..... *186
Discharging condenser ..... *105
Electronic phase failure relay. Stansbury & Brown ..... *46
Initial impulse indicator. Livingston & Lord ..... *257
Kathetron. P. H. Craig ..... *70
Magnetic control of mercury vapor rectifier tubes. H. J. Reich..... 48
Single tube thyratron inverter. Livingston & Lord ..... *96
Thyratron controlled voltage rectifiers. H. W. Hartman ..... *43

**Traffic Control:**

Electric signs controlled by traffic lights ..... 163

**Transformers:**

Iron core intermediate frequency transformers. Alfred Crossley ..... *298
Litz wire coils for i-f and r-f transformers *303, pt. 2..... *342
Transformers. W. J. Leidy..... 212

**Vacuum Tubes:**

Calculating machines and vacuum tubes ..... *224
Cold cathode amplifier tube. Reich & Hesselberth ..... *282
Combined photo and amplifier tubes. H. A. McIlvaine ..... *224
Detector-output tube systems. J. R. Nelson ..... *94
Device for temperature regulation of mercury vapor tubes. Stansbury & Brown ..... *104
Electron emitting alloys of nickel and barium. Randolph, Duffendack & Wolfe ..... *244
Emission valve modulator for superheterodynes. H. A. Wheeler ..... *76
Gaseous discharge tubes for radio receiver use. J. F. Dreyer, Jr..... *40
Graphite anodes in transmitting tubes. D. E. Replogle ..... *338
Manufacture of mercury vapor rectifier tubes. P. G. Weiller ..... *99
New amplifiers—detectors and rectifiers ..... 35
New low noise vacuum tube ..... 18
New tubes—new tube materials ..... 93
Nickel in radio tube manufacture. A. J. Marino ..... *4
Role of vacuum-tubes in a tube factory. W. P. Koechel ..... *121
Thermionic cathodes for gas filled tubes. E. F. Lowry ..... *280
Thermionic tetrode voltage control... *19
Tubes with cold cathodes. August Hund ..... *6

**Vacuum Tubes—Applications:**

Aids in manufacturing electronic apparatus ..... *90
Control of temperature in crystal ovens ..... *253
Electron tube time-delay relay. G. C. Holloway ..... *220
Orientation mechanism. A. L. Rubenstein ..... *225
Relays for electronic devices..... *36
Smoke precipitation with electronic rectifiers ..... 254
Thyratron control of welding in tube manufacture. Lord & Livingston.. *186
Vacuum tube delay circuits. M. W. Muehter ..... *336
Variable speed motor with vacuum tubes ..... *192

**X-Rays:**

Industrial X-rays for examining metals 45

## AUTHORS' INDEX

AIKEN, CHARLES B. Time delay effects in synchronous broadcasting. *124

BARBER, ALFRED W. New impedance measuring device ..... *194
Belcher, Davis. Radio acoustic ranging. *308
Brown, C. B. Simultaneous traces with cathode ray oscillograph ..... *170
Brown, G. C., and C. Stansbury. Device for temperature regulation of mercury vapor tubes ..... *104
Electronic phase failure relay ..... *46
Browning, G. H., and Rupert Haskins. Suppression of auto radio noise... *273

CORNELL, J. I., and I. WOLFF. Acoustically compensated volume control. *50
Craig, Palmer H. Kathetron-control tube with external grid ..... *70
Crossley, Alfred. Iron core intermediate frequency transformers ..... *298

DIAMOND, H. Radio system for landing aircraft during fog..... *158
Dietsch, Carl G. Suppression of transmitter harmonics ..... *167
Dreher, Carl. Control of sound quality in picture production ..... *10
Dreyer, John F. Jr. Gaseous discharge tubes for radio receiver use.... *40
Duffendack, O. S., D. W. Randolph and R. A. Wolfe. Electron emitting alloys of nickel and barium....*244
Dumont, Allen B. Cathautograph: electronic pencil ..... *7

FISHER, C. B. Frequency comparison with the cathode-ray oscillograph. *310
Free, E. E. To warn truck drivers to turn out for motorists ..... 307

GERTH, RUTH KOCH. Radio cabinet design ..... *182

HALLER, C. E., and D. D. KNOWLES. Phantom tester ..... *248
Hartman, H. W. Thyratron controlled voltage rectifier ..... *43
Haskins, Rupert, and G. H. Browning. Suppression of auto radio noise.. *273
Hesselberth, Wilfred M., and H. J. Reich. Cold cathode amplifier tube.... *282
Holloway, G. C. Electron tube time delay relay ..... *220
Horn, C. W. Proper sites for broadcast stations ..... *66
Hund, August. Tubes with cold cathodes. *6

JACOB, F. N. Broadcast receiver coils. 210

KILGOUR, C. E. Push-pull amplifier graphics ..... *73
Kime, R. Milford. Thyratron laboratory rectifier ..... *219
Knoll, M. Electronic microscope..... *243
Knowles, D. D. Ignitron—a new controlled rectifier ..... *164
Knowles, D. D., and C. E. Haller. Phantom tester ..... *248
Knowles, Hugh S. Loudspeaker cost vs. quality ..... *240
Koechel, W. P. Low range electrostatic voltmeter ..... *252
Role of vacuum tubes in a tube factory ..... *121

LAPORT, E. A. Simplified method of modulator design ..... *184
Leidy, W. J. Transformers ..... 212
Lewis, R. O. Electrolytic condensers.... *212
Livingston, O. W., and H. W. Lord. Initial impulse indicator ..... *257
Single tube thyratron inverter..... *96
Thyratron control of welding in tube manufacture ..... *186
Lord, H. W., and O. W. Livingston. Initial impulse indicator ..... *257
Single tube thyratron inverter..... *96
Thyratron control of welding in tube manufacture ..... *186
Lowry, E. F. Thermionic cathodes for gas filled tubes ..... *280

MARINO, A. J. Place of nickel in radio tube manufacture ..... *4
McDill, Rex D. Installing photocell control 276
McIlvaine, H. A. Combined photo and amplifier tubes ..... *224
Meissner, Earl R. Calibration of low audio frequencies ..... 137
Messing, Edgar. Notes on dual band receiver designer ..... *300
Moore, W. H. Simple ultra short wave wavemeters ..... *311
Muehter, M. W. Vacuum tube delay circuits ..... *336

NELSON, J. R. Detector-output tube systems ..... *94
Neustadt, Herbert, Jr. Photoelectric color measuring instruments ..... *128

ORTH, R. T. Cathode ray tubes for oscillograph purposes ..... *332

PODOLSKY, LEON. Electronics in resistor manufacturing ..... *180
Potter, J. L. Rectifier for modulation measurements ..... *247

| October | 299-334 |
| November | 335-368 |
| December | 369-404 |

(ed) Editorial • Illustrated

**Acoustics:**

Emergency acoustic treatment for armory •40
Soundings from a plane by acoustic echo 49

**Aeronautics:**

Aircraft radio service improved •270
Aviation beacon receiver •248
Soundings from a plane by acoustic echo 49
Teaching pilots "blind flying" in radio beam •216

**Amplifiers:**

A-C operated high gain amplifiers. D. E. Noble •210
Applying neutralization to a.f. amplifiers. P. W. Klipsch •252
AVC applied to audio frequency amplifier tubes. J. R. Nelson •50
Diversified uses of amplifiers •34
Dynamic microphone amplifier. A. J. Sanial •52
High-gain amplifier •54
Improved single tube balanced d-c amplifier •159
Simplifying dynamic tube curves. R. C. Hitchcock •220
Study of super-regeneration •42
Used to study currents produced by thoughts 48

Book reviews..53, 91, 129, 224, 263, 292, 320, 357, 399

**Broadcasting:**

Annual tube replacement cost for broadcast stations 113
Automatic line-measuring equipment of the German broadcast system. R. W. P. Leonhardt •347
Automatic recording of field strength. C. M. Jansky, Jr. •148
Broadcast transmitter characteristics. Clark & Schuttig •378
Do radio listeners want high fidelity? (ed) 33
High fidelity broadcast transmitter performance. E. A. Laport •144
High fidelity—economics and technique •108
High fidelity program circuits. J. B. Epperson •341
Improving the broadcast of recorded programs. G. H. Miller •178
Keep faith with "high fidelity" (ed). 135
Measuring resistance of broadcast antennas. Scott Helt •45
Metal-clad grid-controlled mercury rectifiers for radio stations. S. R. Durand •4
Microphone switching systems for broadcast stations. L. W. Barnett. •152
100 watt broadcast station costs... 308
Present costs of broadcast stations.. 254
Prospects of high fidelity transmission •206
Registering broadcast listeners' opinions 118
Revise transmitter sales practices.... •204
Studio characteristics (table) 327
Ten meters and below •273
Time switch starts station WLW.... 154
Tower antennas. E. A. Laport..... •238
Trans-Atlantic phone uses "Compandor" to overcome static ..... 317
Transmission progress at CBS. A. B. Chamberlain •138
Visual indicator for orchestral levels •82
WBBM and KFAB to be synchronized •54

**Cathode Rays:**

Advance in cathode-ray system..... 272
Problems of cathode ray television. I. G. Maloff •10
Photography of transients with cathode ray oscillograph .....•125

**Electron Tubes:**

"Acorn" tubes for ultra-high frequencies. Bernard Slazberg .....•282
All-metal vacuum tubes. Pike & Metcalf •312
Characteristics of 1934 tubes (chart) 151
Electron multiplier •242
Evolution of the thermionic tube....•147
Linear modulation by a 55-tube. Bagno & Egert •16
Processes in vacuum tube manufacture. E. R. Wagner •213
Raw materials in vacuum tube manufacture. E. R. Wagner.....•104
Recent developments set pace for progress in 1934 •1
Relations in the receiving tube family (chart) 343
Tube classification chart 158
Voltage doubler tube—new light relay.•124

**Electron Tubes—Application:**

Electron control for high speed motion pictures. D. G. Fink .....•250
Electron-tube voltage control for photometry. Kilpatrick & Bernhardt.•352
Electronic voltage control of d-c generators. W. P. Koechel..... 86
Electronic voltage regulators in power plants 354
Electronic voltage relay. J. W. Graff •80
Frequency control with thermionic tubes •284
Motor control by electron tubes. F. H. Gulliksen •179
Speedomax—electron tube recording potentiometer •21
Telemetering system using vacuum tube detectors •322
Temperature control by electron tubes. Keith Henney .....•183

**Electrons:**

How cosmic rays smash atoms, penetrate steel and concrete .....•117

**Facsimile:**

Facsimile apparatus ..... •71
Facsimile newspapers ..... 2
"Home radio printing press" .....•336
Now in the commercial stage.....•269

Geophysical prospecting consultants..... 216

**High Frequencies:**

"Acorn" tubes for ultra high frequencies. Bernard Salzberg.....•282
Coil design for short wave receivers.•174
Electric wave filters for high frequencies. C. L. Frederick ..... •84

Inductance-coil calculations (chart)..... 315

**Institute of Radio Engineers:**

Fall meeting at Rochester discusses new developments ..... 375
Fall meeting of Rochester Section—program ..... 314
Program for convention .....•136

**Lights and Lighting:**

Electronic units control theatre lighting. J. W. Dawson .....•323

**Measurements:**

Analysis of efficient modulation. E. N. Dingley, Jr. ..... •78
All wave signal generator for production tests. R. F. Shea .....•244
Chart for simple attenuator design. W. W. Waltz ..... 247
D-C voltage stabilization. H. W. Kohler .....•388
Diode-triode peak voltmeter. A. W. Barber .....•322
Dynamic tube measurements. W. P. Koechel .....•381
Electronic multiplier for high speed counting. Lord & Livingston..... •7
Electronic photelometer ..... 221
Fineness of cement measured ..... •15
Linear rectification. Ray Lambert... •21
Logarithmic voltmeter .....•87
Making a-c and d-c scales correspond on a universal voltmeter. C. F. Mathieson ..... •55
Measuring resistance of broadcast antennas. Scott Helt ..... •45
Oscillator detector ..... 83
Photography of transients with cathode-ray oscillograph .....•125
Power supply and linear time axis for cathode ray oscillographs. Meier & Richards .....•110
Precise light measurement. D. G. Fink 190
Precision condenser calibration at radio frequencies. Hall & George.....•318
Reactance values of capacitances and inductances for the middle radio frequencies (chart) ..... 219
Regenerative null indicator. D. E. Noble .....•190
Single-tube beat-frequency oscillator. Podolsky & McBride .....•356

**Music:**

Electronic music from vibrating reeds. R. G. Silbar .....•226
WCAU'S photocell organ .....•157

**National Electrical Mfgrs. Assn.:**

Industrial Electronic-Tube section meeting .....•350

New products....28, 60, 95, 130, 164, 197, 230, 260, 294, 329, 365, 396

**Noise:**

Survey of Buffalo and New York City noises ..... 14
Transportation noise intensities..... 48

**Patents:**

British patents..64, 100, 202, 266, 334, 402
Vibrator power supply patents..... 296
U. S. patents....30, 62, 97, 133, 167, 200, 232, 264, 296, 332, 368, 400

**Photo-Electric Cell:**

Analog between dry-disc phototube and chemical cell ..... 20
Photocell static discharger at WLW..•316
Photoelectric density comparator for analyzing spectrograms .....•358
Vacuum type phototube with sensitivity of the better gas cells..... •86
Weather Bureau uses photocells. E. B. Lyford ..... 316

**Photo-Electric Cell—Industrial Applications:**

Cable stretch compensated by photocells ..... 49
Car painting controlled by photocell ..... 284
Cement bags registered by photocells 49
Color analyzer .....•285
Cuts cloth labels of ribbon width automatically ..... •14
Daylight intensity controlled by phototubes .....•186
Deep sea fishing levels studied by photocells ..... 15
Elevators, automatic, protected by photocell ..... 15
High speed electronic resistor sorter.•249
Machine designer looks at electronic industrial control. R. W. Carson.... 156
Measuring luster of textiles.....•187
Possibilities in electronic exhibits.... 119
Rubber sheeting protected by photocell 285
Tube control of rubber extruder.... 118
WCAU's photocell organ .....•157

**Radio:**

All-wave signal generator for production tests. R. F. Shea .....*244
Aircraft radio service improved in many directions .....*270
"All-wave" receivers .....*276
Assignments in the radio spectrum (chart) ..... 274
Auto radio forges ahead ..... *37
Aviation beacon receiver .....*248
Cabinet design. John Vassos.....*146
Catechism on iron for radio tubes.... 124
Characteristics of German radio receivers. W. E. Schrage.....*306
Characteristics of insulated wires used in radio set production. R. G. Zender ..... *18
Coil design for short wave receivers.*174
Detector distortion. K. W. Jarvis....*386
Eleven years of radio receiver manufacture ..... *72
Federal Communications Commission (ed) ..... 65
High fidelity—economics and technique .....*108
I.R.E. discusses new developments at Rochester meeting ..... 375
Increased efficiency from tower antennas. E. A. Laport .....*238
Legislation before Congress regarding radio ..... 102
Mechanical features of the season's radio set .....*344
Mobile printer for police and aircraft radio .....*218
Plan to eliminate radio interference. A. N. Goldsmith .....*370
Police radio adopts two-way system on ultra high frequencies .....*271
Police radio communication. H. E. Thomas ..... *74
Power transformers for automobile radio vibrators. V. C. MacNabb..*149
Program for Radio Engineers' convention .....*136
Relations in the receiving tube family (chart) ..... 343
Statistics and markets for 1933.... *66
Study of r-f choke coils. Reuben Lee.*120
Sun's effects on radio. J. L. Richey.*188
Suppressor resistors and their effects on automobile operation ..... 70
Teaching pilots "blind" flying in radio beam .....*216
Testing capacitors and resistors. C. G. Seright .....*279
Vibrator power supply from dry cells. Walter van B. Roberts .....*214
What are the costs of police radio? D. G. Fink .....*372

**Radio Manufacturers Assn.:**

"Self government" and new code....*236
Rectification, linear. K. C. DeWalt.....*252

**Relays:**

Electronic voltage relay. J. W. Graff *80
Review of electronic literature....25, 58, 92, 126, 162, 194, 227, 258, 290, 326, 362, 393

**Sound Pictures:**

Home-recording on 16-mm film.....*176
March toward high fidelity in sound (charts) ..... 185
Noiseless recording with double triangle slit. Dimmick & Belar.....*142

**Superheterodyne:**

Superheterodyne tuning condenser design. Burnell & Schwartzmann....*180

**Telephone and telegraph arts find many electronic applications .....*268**

**Television:**

Electron multiplier .....*242
Nears technical solution.....*172
Problems of cathode ray television. I. G. Maloff ..... *10
Representative television systems.... 305
Survey of present-day systems.....*300
Television progress .....*272

**Thyratrons:**

Shield grid thyratrons. Livingston & Maser .....*114

**Traffic Control:**

Counting traffic at Cairo, Ill., bridge.*275
Traffic volume analyzed by photocells 354

**Transformers:**

Design for radio set transformers. C. A. Hultberg .....*286, *310
Ferrocart and its applications. J. V. Fill .....*358
Iron-core coils for use at r.f. or i.f. W. J. Polydoroff ..... 13
Power transformers for automobile radio vibrators. V. C. MacNabb..*149

**X-Rays:**

Gigantic welded pipe tested with X-ray .....*154
Television scanning technique applied to X-ray diagnosis ..... 253

## AUTHORS' INDEX

BAGNO, S., and S. S. EGERT. Linear modulation by a 55-tube..... *16
Barber, A. W. Diode-triode peak voltmeter.*322
Barnett, Louis W. Microphone switching systems for broadcast stations..*152
Belar, H., and G. L. Dimmick. Noiseless recording with double-triangle slit.*142
Bernhardt, Carl P., and F. E. Kilpatrick. Electron-tube voltage control for photometry .....*352
Burnell, L. G., and H. Schwartzmann. Superheterodyne tuning condenser design .....*180

CARSON, ROBERT W. Machine designer looks at electronic industrial control ..... 156
Chamberlain, A. B. Broadcast transmission progress at CBS .....*138
Clark, A. S., and L. A. Schuttig. Broadcast transmitter characteristics..*378

DAWSON, J. W. Electronic units control theatre lighting .....*323
DeWalt, K. C. Linear rectification.....*252
Dimmick, G. L., and H. Belar. Noiseless recording with double triangle slit .....*142
Dingley, E. N. Jr. Analysis of efficient modulation ..... *78
Durand, Samuel R. Metal-clad grid-controlled mercury rectifiers for radio stations ..... *4

EGERT, S. S., and S. Bagno. Linear modulation by a 55-tube ..... *16
Epperson, J. B. High fidelity program circuits .....*341

FILL, J. V. Ferrocart and its applications .....*358
Fink, Donald G. Electron control for high speed motion pictures....*250
Precise light measurement ..... 190
What are the costs of police radio?.*372
Frederick, Carl L. Electric wave filters for high frequencies ..... *84

GEORGE, W. D., and E. L. HALL. Precision condenser calibration at radio frequencies .....*318
Goldsmith, Alfred N. Plan to eliminate radio interference .....*370
Graff, J. W. Electronic voltage relay.. *80
Gulliksen, F. H. Electron tube motor control .....*179

HALL, E. L., and W. D. GEORGE. Precision condenser calibration at radio frequencies .....*318
Helt, Scott. Measuring resistance of broadcast antennas ..... *45
Henney, Keith. Temperature control by electron tubes .....*183
Hitchcock, R. C. Simplifying dynamic tube curves .....*220
Hultberg, C. A. Economical design for radio set transformers ....*286, *310

JANSKY, C. M., JR. Automatic recording of field strength .....*148
Jarvis, K. W. Detector distortion.....*386
